

# Carbon Farming in the Wheatbelt

Helping Farmers make informed decisions about measuring and managing their carbon emissions.

The National Industry-led Carbon Farming Outreach Program is delivering un-biased, independent carbon farming knowledge to primary producers

## BENEFITS OF ATTENDING THIS WORKSHOP:

1

Gain an understanding of what carbon farming means for farmers and land managers;

2

Learn how to calculate greenhouse gas emissions and carbon storage for your property;

3

Identify carbon farming opportunities both inside the farm gate (farm production), and outside (value-adding, complimentary activities, or diversification);

4

Decide the most appropriate carbon farming activities or practices for your operation and

5

Understand the obligations and risks involved in establishing and running a project.

All registered participants will be sent links to calculators prior to the workshop to commence getting a feel for the type of information required to help determine your 'on-farm emissions'.

The workshop will include a worked example of an on-farm 'carbon account' and opportunity to ask questions about your own production data, with time allocated to explore what changes mean to your emissions intensity.

## EVENT DETAILS

**DATE:** 14 March 2025  
**TIME:** 8:30am-4:30pm  
**ADDRESS:** York CRC Training Room,  
89 Avon Terrace, York, WA  
**COST:** Free & fully catered.

Scan the QR code to register your seat.
